

## Invited Seminar

Estela Jacinto

Associate Professor  
Robert Wood Johnson Medical School  
Department of Biochemistry & Molecular Biology

### **Title:** **mTOR complex 2 in metabolism**

Research in my lab aims to understand how nutrients and growth factors control intracellular signaling pathways and how these pathways are coupled to cellular metabolism. We specifically focus on the mechanistic target of rapamycin (mTOR) signaling pathway and how it plays a role in cancer metabolism, diabetes and T cell biology. Our goal is to understand how cells rewire metabolic processes in response to genetic and environmental changes and how we can manipulate this reprogramming process to improve immunotherapy and develop more effective therapeutic strategies for cancer and other metabolic disorders. We use both mammalian cell and mouse models and employ techniques including proteomics/genomics, metabolomics, flow cytometry, biochemical and cell biology techniques.

**When: June 21<sup>st</sup> at 15:00 Room H811 (top floor), MEM Murtenstrasse 35**

Host: Marianna Kruihof-de Julio, DBMR ([marianna.kruihofdejulio@dbmr.unibe.ch](mailto:marianna.kruihofdejulio@dbmr.unibe.ch)) – please get in touch if you would like to meet the Speaker.
